Swipe left to trash; right to save?								49

The red circles are new additions.

**Line 10:** We are keeping this. We will get the data from Google address/GPS data stores; and allow users to edit. Also, there might be some adhoc event going on: Street Fair, demonstrations, etc. – thus we need to provide this for the user.

**Line 47:** This is alternate place for the Map tab. This way we can keep “Saved” at the navi tab (box4).

**For now, let’s keep above for only Fig 1.**

**FYI: (Diego!) I studied Waze extensively.** They do a lot of good things. (e.g. Is **anonymous**; then if user wants to message (privately to another driver/user; or chat (public) – then user needs to register, or at least have a handle; also **lot of gamification of behavior**, adding points, rankings – for posting, for confirming that “police” is there or reporting traffic events.) Suggest to study.

Also, Wase and few apps show their logo screen, then the home page; while others load the home page first. Not sure what to do. However if Home page (F1) is loaded first, to load the top parts first/fast, while the rest of page loads. Wase was bought by Google or \$1 B in 2013. They did something nice too: Like in “Thailand” – the roads/maps are not mapped or maps are unreliable – thus, they users crowd soruced the map accuracy (in the jungle, etc.) Like in “Thailand” – the roads/maps are not mapped or maps are unreliable – thus, they users crowd soruced the map accuracy (in the jungle, etc.)

The above is the home page, after their logo: I like that their “Tip” box is shown at the bottom for few seconds. Also the search box is there until the user moves the map, then it disappears.	In the above, when I touch and empty area of the screen – the Search box and the right side arrow and + and – appears for few seconds.	Touching the lower right icon, opens the dialog/menu.
