

Opens App: The F1 Screen loads. (Home page)
---

**Fig 1: Landing Page/Home Board(s) View**

ShoutAut: At Home, this can  
Refresh. (Think like email list).  
Other screens, back to Home page.

Post tab, or bottom: Goes to Fig 4.

MyPlaces: Go to Fig 9b (Diego, you decide either 9 or 9b to use.)  
I think 9b...seems better (with or with the Navi bar even).

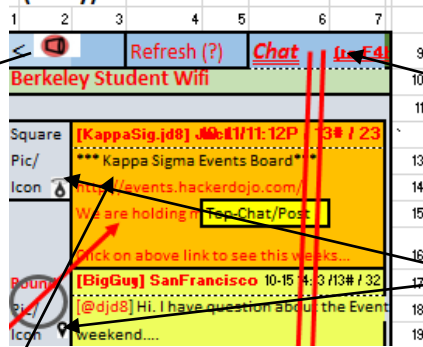

Opens Fig 2, and loads this Chat at the Top. Please note that this chat has hyperlink. It does NOT have to be active in Fig 1. But, why not? B/c touching anywhere in a Chat means to open that Chat in Fig 2.

Optional: Touching Pic area can show larger picture of that Profile, in a popup. If user has no pic loaded, then use the ShoutAut icon(?)

Swipe left on a Posting deletes the Chat and its threads if any. For, now lets keep the swipe to Fig 1. But, if it can be done for Fig 2's individual chats, it would be great !!

Optional for beta. But, these can sort the Chats. Alternate location for these are the 3 dots. Or the device Settings.

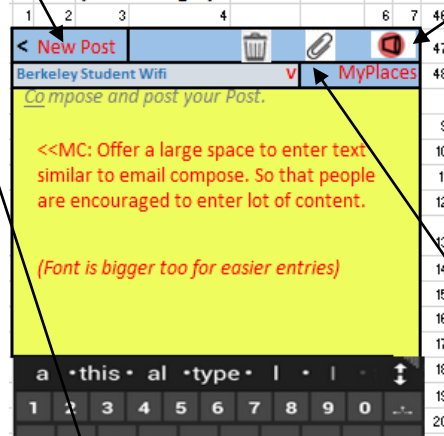

Fig 2: The Chat's full Post and Thread (if any)						
---	--	--	--	--	--	--

Chat loads the Fig 4b (or it slides out over the Fig 2 view). Long press on a Chat, does the same. Not sure what to do with Refresh. (Its not essential for beta – in any of the screens.)

This shows if the user is on the wifi for that Posting, or is away.

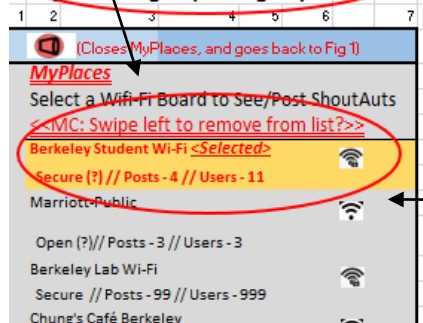

**Fig 4: Post compose.**  
(if from Fig 1)

Done: Loads the Posting to the Server for publishing.

Diego! I removed the pic square box (in the 2<sup>nd</sup> option for the compose view). Pic is not essential to be seen here (and pic can be loaded in Settings) If so: Then a great benefit is that the Fig 4 Compose can even be a slide out at Fig 1. So that: To give user the does “not have to leave” Fig 1 experience. Thus, the MyPlaces tab (i.e. the entire Navi bar) is not needed here. Instead the line 25 – wifi(s) tab can be there, so that the user can cause the Fig 9b to pop up over the screen.

Fig 9-b: MyPlaces view - Only is from Fig 1 and Fig 4. (not Fig 4b)

After User selects a wifi (or not) and either touches the ShoutAut icon in the Navi bar or the device back button – the Fig 9-b disappears and Fig 1 or Fig 4 is shown. If user comes from Fig 4, then to Fig 4.
