Diego!

I am thinking that for Posts, we give them wider space.

The pic area, I assume will take about 3 lines.

The status bar will take one line. Then we can give from 2 (above middle example) to 4 lines in the Fig 1 to show the beginnings of the Post.

BTW, again, the above middle pic area has Pin and special border to indicate that the user is "on location" at the wifi.

blah <<MC: Diego this wider area, I think is better for the Main Posting... The only issue was how to do the Fig 4 and Fig 5 (formerly Fig 4b)

blah The reason is that Post is important, and we should give the users as much room as possible. And in the future, we will allow them to insert images here too.

Hi. This is great!

Compose your Post.

The content area is larger for the Post. And is more practical, IMO.

New: **[KappaSig.jd8]** 11.20/07:31P

I think that we need to show this in the Post and Chat... at least to give the user only 2 lines (WYSIWYG)...in the "subject lines" area.

We only put their handle (if any) or Anonymous if none; then the date and time.

Pic **[KappaSig.jd8]** 11.20/07:31P

@Berkeley.d8f Compose your Chat.

I don't like the fact that the Chat compose area got narrower, but I think this is what we should do...but, Diego...you decide and work it out.

These are similar to the "Send" in email apps. It is Done and to load the Post or Chat to server.

Ted....

All boards will be open or Public - for the beta.

This is as simple as I can get it.

The only remaining decision, is if to only show the Boards when the user is at the wifi zone, and not show if they go away. For now, I prefer that once they have access* to a Board, they can see from away.

*The reason is that, it is more practical and people often go in and out of places...whether for events or work place.

This "Secure" wifi Board is here as FYI. For the Beta, we will not have Secure Boards. We will only do open Boards. Later, we can differentiate like this.

Thus, for the beta, we don't need to figure out if the user is on a secure wifi or not. WE DON'T EVEN check to see if they are on a particular Wi-Fi or not - for the purpose of showing the Boards. Because we will do that internally - by either doing our own scan of the Wi-Fis (Not preferred). Or, looking at the Device's own wifi status and saved. If we can see the device's saved, then we can show the Board for that, even the NEW ShoutAut user had not had the chance to open or use the app at his "saved" Wi-Fi places.

Thus, the user has access to ANY Wi-Fi and Board that are in his Wi-Fi range. And for the Wi-Fis not in his range the Wi-Fis that his device registers as saved

Fig 8: We don't force this on the users. Or, we can. We can make it mandatory to either do pic or words or both. Not sure yet. But, in any case, we wait until they decide to do a posting.
